# DIREXYON

Infra

**DIREXYON Infra** is a decision support software solution that lets you analyze your real options, optimize your investments, quantify your risks and increase the probability of meeting your objectives, all in accordance with your decision-making policies. The solution is ideal for complex, high-capital, and strategic Asset Investment Planning (AIP) applications.

## ANSWER MORE QUESTIONS, MORE COMPLETELY

- › What asset performance can I expect over the long term?
- › Am I investing too little or too much?
- › When should I expect major infrastructure spending spikes?
- › What is the optimal asset performance & cost mix?
- › Do I have the resources to execute the work?
- › Are my internal departments aligned?

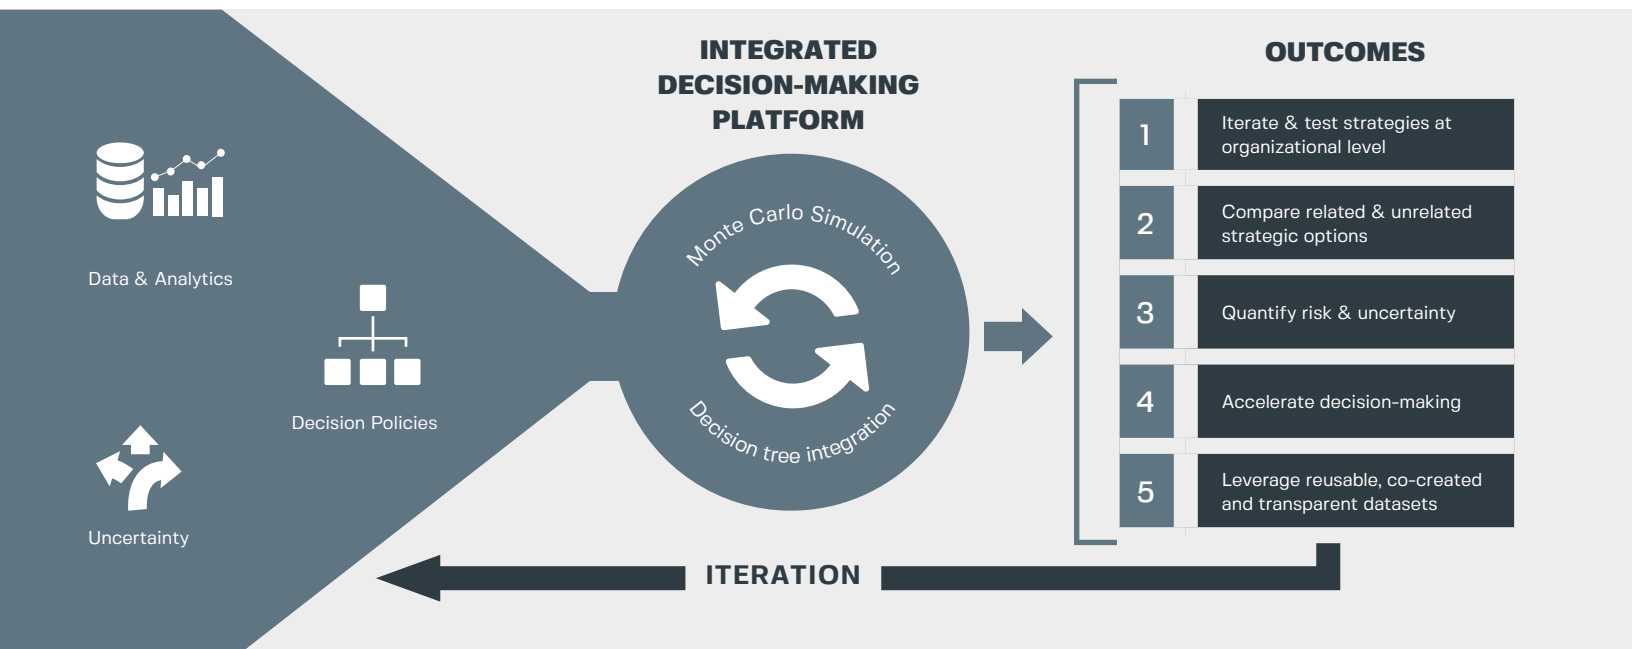

## THE DIREXYON APPROACH ALLOWS YOUR ORGANIZATION TO:

- 1. Digitize expertise.** Asset and financial data is consolidated and represented in human-readable decision trees (not complex procedural code).
- 2. Perform cross-asset analysis.** Manage cross asset policies to synchronize multiple asset classes and interdependencies.
- 3. Unify your teams.** All departments use one centralized system and source of truth. The silo effect is greatly reduced.
- 4. Eliminate IT dependence.** No programming is required to modify asset models and policies.
- 5. Start with incomplete datasets.** Modelers can leverage existing data. Our modelers have methods to fill the gaps and get you started quickly.
- 6. Be flexible and adaptable.** Teams can iterate and experiment rapidly, and can evolve with changing business needs.
- 7. Leverage predictive analytics.** Analyze future trends to be proactive, not reactive. Understand your risk and apply strategies.
- 8. Benefit from results and source data traceability.** Enable your teams to link results back to source data and explain where the results originated from.

## POSITIVE BUSINESS IMPACTS

- › Mitigate risk and ensure risk tolerance metrics are met.
- › Reduce Mean-Time-to-Decision (MTTD).
- › Reduce dependence on key individuals by systemizing processes and data.
- › Be more confident in the data and your decisions.

# DIREXYON

Suite

**DIREXYON Suite** is a software solution that retrieves information from various data sources to perform modeling, analysis and presentation of financial information.

## FINANCIAL ANALYSIS ASSESSMENT

- › Financial forecast modeling
- › Risk management and analysis

## RISK MANAGEMENT

- › Dynamic generation of financial statements
- › User-friendly customization

---

## POSITIVE BUSINESS IMPACTS

- › Reduce manual tasks - Automate tasks and processes.
- › Data integrity - Minimization of manual errors, centralization of information in a database and management of authorizations.
- › Autonomy - Accounting modeling autonomy from beginning to end.
- › Maintenance flexibility - Rapid adaptation to database changes without the need to redeploy the application.

## DIREXYON solutions provide strategic decision analytics for many industries and applications:

### ASSET-INTENSIVE SECTORS:

- › Telecommunications
- › Power & Utilities
- › Oil & Gas
- › Transportation
- › Municipalities
- › Airports
- › Maritime sea routes and ports

### OTHER APPLICATIONS:

- › Fleet management
- › Loyalty programs
- › Consumer Lifetime Value
- › Citizen impact studies and others
- › Infrastructure investment fund analysis
- › M&A due diligence
- › Public private partnerships (P3)
- › Aligning experts and supporting user groups
- › Procurement and strategic acquisition planning

## OUR CUSTOMERS

# DIREXYON

DIREXYON provides large organizations solutions for strategic financial modeling. Its software products help organizations take the best strategic decisions through the digitization of their institutional expertise.
